About The Department

Established in 2018, the Department of Management aims at developing global citizens of tomorrow through research, innovation, life skills, technical skills, and ethical training. The Department focuses on the education ecosystem through enshrined core values of intellectual excellence, collegiality, diversity, and integrity. As of today, it offers two-year full time MBA (General), MBA (Super Specialization), MBA(Integrated), MBA (Hospitality Management), MBA (Business Analytics) and Ph.D. programme from the University campus. The courses offer a unique and inspirational academic model designed to match the international standards. A wide spectrum of programs is paired with flexibility, experiential learning, and interdisciplinary orientation. The Department has a dynamic academic fraternity drawn from top universities nationally and internationally. The Department is the epitome of excellence and has created dynamic industry leaders and aspires to develop into a destination of choice for future managers. Department attracts a great diversity of students who have the drive, confidence, and a burning desire to advance the progress for business and society. Students here get the platform to train themselves with a view to face the challenges of the corporate world with confidence. Special emphasis is given to their holistic development through a healthy and collaborative learning environment. An integrated approach that combines field work, case studies, presentations and group discussions is followed by the department to inculcate pedagogical and conceptual knowledge along with practical exposure of management concepts and theories in students.

Programme Outcomes

Programme Outcomes (PO) of Post Graduate Programmes/Courses in the Faculty of Commerce and Management, Gurugram University, Gurugram are as under:

PO1	Apply knowledge of management theories and practices to solve business problems.
PO2	Foster Analytical and critical thinking abilities for data-based decision making.
PO3	Ability to develop Value based Leadership.
PO4	Ability to understand, analyze and communicate global, economic, legal, and ethical aspects of business.
PO5	Ability to lead themselves and others in the achievement of organizational goals, contributing effectively to a team environment.
PO6	Develop deeper understanding, creativity, originality, and critical skills in chosen specialized areas of social science disciplines leading to employability.
PO7	Articulate and apply ethics, values and ideals that demonstrate awareness of current societal challenges leading to better quality of life.
PO8	Communicate conclusions, interpretations, and implications clearly, concisely and effectively, both orally and in writing for different types of audiences.

Programme Specific Outcomes (PSOs)

The MBA is a highly prominent management programme of modern times and prepares the participants for taking up middle and top-level challenging executive assignments in private and public sectors. Accordingly, they are imparted adequate conceptual knowledge and practical training in various functional areas of management i.e., Finance, Marketing, Organizational Behaviour and Human Resource Management, Data Analytics, and supply chain management. MBA programme is a two years programme divided into four semesters. The programme is aimed at following outcomes:

PSO1	Developing the ability to think strategically, gaining competency in quantitative and qualitative techniques, gaining an understanding of global business dynamics, inculcating multicultural outlook, learning to navigate and manage organizational change effectively and understanding the role of technology in business transformation to derive business growth and competitiveness.
PSO2	Developing responsiveness to contextual social issues and exploring solutions, understanding business ethics and resolving ethical dilemmas, cultivating a mindset of lifelong learning and professional development to adapt to evolving business trends and challenges throughout their career, fostering an entrepreneurial mindset by encouraging innovation, creativity, and risk-taking abilities to identify and capitalize on business opportunities.

Qualification Descriptors

- Students shall be admitted to a two-year programme with the second year devoted entirely to specialization.
- A programme of study leading to the MBA degree is open to those who have met the entrance requirements, including specified levels of attainment, in the programme admission regulations. Admission to a programme of study is based on the evaluation of documentary evidence (including the academic record) of the applicant's ability to undertake MBA study.

Scheme of Programme

MBA - a four-semester postgraduate programme is of 106 credits; weightage consisting of **Core Courses (CC)**, **Skill Enhancement Courses (SEC)**, **Ability Enhancement Courses (AEC)**, **Value Addition Courses (VAC)**, **Discipline Specific Elective Courses (DSE)**, **Multidisciplinary Courses (MDC)** **Specialization Specific Elective Course (SSE)** and **Internship/ Dissertation/ Research Project/ Seminar**.

Course Outcomes and Mapping Matrix:

- Each Course of the MBA Programme results in few Course/Learning Outcomes (COs) which are broadly mapped or associated with POs as well as PSOs.
- Mapping is a process of representing the correlation between COs and POs, COs and PSOs in the scale of 1 to 3 as follows.

Scale of Mapping between COs and POs & COs and PSOs

Scale 1	If the contents of course have low correlation (less than 50 %) with the particular Programme Outcomes and particular Programme Specific Outcomes.
Scale 2	If the contents of course have medium correlation (50%-70%) with the particular Programme Outcomes and Programme Specific Outcomes.
Scale 3	If the contents of course have strong correlation (more than 70%) with the particular Programme Outcomes and Programme Specific Outcomes.

Scheme of Examination

MBA First Year First Semester (Total Credits: 22, Marks -550)

Co urs e Co de	Course Title	Cou rse Id	Theory Marks		Practical Marks		Total Marks	Credits

It is mandatory for the student to submit passing certificate of the same to the department, to be able to appear for the viva. For MOOC courses, 50 marks will be for the certificate earned (external practical) and 25 marks will be allotted on the basis of internal (internal practical) viva.

**Students may opt for either Business Research Methods (Basic) or Business Research Methods (Advanced), based on their interest in the course. (Students may refer to the syllabus for further clarity)

Summer Training: At the end of second semester, all the students will have to undergo summer training of 4-6 weeks with an industrial, business or service organization. The condition of successfully completing the programme shall not be deemed to have been satisfied unless a student undergoes summer training under the supervision of faculty from the department. Each student will be required to submit a summer training report to the department for the work undertaken for evaluation in the third semester. Internal evaluation of 30 marks will be done by Internal Guide /Mentor and 70 marks will be based on External viva before the committee of three members constituted by the Dean/Chairperson of the Department.

Exit Policy: For MBA-Business Analytics programme, there are two exit points, one, at the end of the first year of the MBA programme after successfully earning 44 credits of First and Second semesters and second, on the completion of the two-year programme, after successfully earning 106 credits of all the four semesters. Students who exit after the first year shall be awarded the Post-Graduate Diploma in Management and students who exit after the completion of the second year will be awarded 'Master of Business Administration- Business Analytics'.

MBA Second Year Third Semester (Total Credits: 34, Marks - 850)

After completing 1st and 2nd Semesters, students are required to study four courses pertaining to Business Analytics Specialization in both the third and the fourth semesters.

MBA Second Year Fourth Semester (Total Credits: 28, Marks - 700)

Specialization Based Research Project: During the 4th semester the students will have to work on a research project of their specialized area under the supervision of faculty

member of the department. Each student will be required to submit a project report to the department for the work undertaken for evaluation in the 4th semester. Internal evaluation of 50 marks will be done by Internal Guide /Mentor and 100 marks will be based on External viva before the committee of three members constituted by the Dean/Chairperson of the Department.

Notes:

1. PLP Stand for Personal Leadership Programme
2. It is mandatory to teach at least two cases per subject per semester.
3. Spreadsheet is the recommended software for doing basic calculations in subjects applicable, hence shall be used for teaching, practice, problem solving and assignments during all the four semesters.
4. The duration of all the end term theory examinations shall be 3 hours

Instructions for the Examiner:

Instructions for the External Examiner: The question paper shall be divided in two sections as follows:

	Theory Marks	70	50	35
Section A	Seven (7/6) short answer type questions from whole of the syllabus carrying equal marks each, this section will be compulsory	7*2=14 Marks	6*1= 6 Marks	7*1=7 Marks
Section B	8 questions (2 questions from each unit). The students will be required to attempt four questions selecting one question from each unit.	14*4= 56 Marks	11*4= 44 Marks	7*4= 28 Marks
	Total Theory Marks	70 Marks	50 Marks	35 Marks

Instructions for the Internal Examiner: The internal assessment should be spread evenly throughout the semester and must include at least 3 independent components including a mid-term exam. Below are the suggested components for internal marks.

	Marks out of			
Total Marks	100	75	50	25
Internal Assessment	30	25	15	5
Attendance	5	5	5	5
Below 55= 0 Marks				

Between 55 to < 65= 1Marks Between 65 to < 70 = 2 Marks Between 70 to < 75 = 3 marks Between 75 to < 80= 4 Marks 80 and more than 80 = 5 Marks				
Assignment/ Presentations/ Seminars and Class Participation	5	5	-	-
Sessional Examination*	20	15	10	-
Total Marks	30	25	15	5

*Sessional will consist of class tests, mid-semester examination(s), homework assignments, class presentations, case analysis, role play etc., as determined by the faculty in charge of the courses of study.

Detailed Syllabus

First Semester

Management Principles and Organizational Behaviour

PAPER CODE: 241/MBA/CC101

Credits: 4

External Marks: 70

Internal Marks: 30

Time Allowed: 3 Hrs.

Type of Course: Core Course

Course Objectives:

Management Principles and Organizational Behaviour is a course which offers insights to understand personality characteristics, work, and team structures, evolving workplace challenges, and interpersonal problems and to apply such understanding to enhance the quality of human dynamics and performance in organizations.

Course Outcomes: On the completion of this course the student will be able to:

CO1: Provide the knowledge and understanding of the tasks and functions of management.

CO2: Comprehend and apply the behavioral patterns of human beings at individual & group levels in the context of an organization.

CO3: Analyze human behavior for prediction and management of human resources in an organization while following ethical code of conduct.

CO4: Evaluate the understanding of the dynamics of interaction and integration between the individual and the organization.

Detailed Syllabus

UNIT I

Fundamentals of Management & Management Process: Evolution of Management thought, Meaning and Nature of Management, Management Approaches, Processes, Managerial functions & competencies, Tasks and Responsibilities of a Managers, Issues in Managing: Change, Technology, Diversity & Globalization, Fundamentals of social responsibility, areas of corporate social responsibility, Social responsiveness and decision making, Basic approaches to Ethics, Tools of Ethics: Values, rights, duties & moral rules, Creating an ethical workplace.

UNIT II

Foundations of Planning, Organizing, Controlling and Managerial Decision making: Importance of Planning, Types & elements of Planning, strategic Planning, and Strategy formulation tools: SWOT analysis, Porter's five forces model, Mc Kinsey's 7-S framework, Types & process of decision making, Decision making models, Decision making under risk, certainty & uncertainty, Effective Delegation, Boundary less Organizations, Meaning, need & process of Control, Importance of Control, Types of Control, Designing an integrated control system, Ethical Issues of Control.

UNIT III

Introduction to Organizational Behaviour :Nature, importance and determinants of OB;

Subsequent Phases of Hawthorne studies and Human Relations Approaches; Predecessors of OB; Relationship with other fields; Understanding, Attribution theories; Individual Learning: Nature and process, Application of learning principles in organizational context; Attitudes: Types & work related attitudes. Managing emotions in organizations – emotional intelligence and emotional labour, stress management; Motivation concept and applications.

UNIT IV

Individual, Group and Organizational level Behaviour: Individual Determinants of Organization Behaviour-Person Perception, Perceptual Process, Importance, and factors affecting perception, Individual Differences - Understanding Self, Nature Vs. Nurture, Johari Window; Personality Traits and Attributes of Personality - Self-Esteem, Type A & B, Locus of Control, Machiavellianism. Group Dynamics and Interpersonal, Relationships, Group processes and group decision making, Dysfunctions of groups, Team: Creating effective teams and turning individuals into team players, Contemporary issues in managing teams. Leadership theories and contemporary issues in leadership, Management of Organizational Conflicts and negotiations, Understanding Power, and Politics.

SUGGESTED READINGS:

1. Organizational Behaviour by Robbins, P., Judge, and Sanghi (2009). Pearson Education.
2. Essentials of Mgmt. by Harold Koontz & Heinz Weichrich (1st ed., Excel Books)
3. Management: Text & Cases by V S P Rao & V Hari Krishna (Excel Books)
4. Management by James A. F. Stoner, r Edward Freeman, Daniel R Gilbert (6th edition, Pearson Education)
5. Organizational Behaviour by Fred Luthans (Tata McGraw-Hill).

ACCOUNTING FOR MANAGERS
241/MBA/CC102

Credits: 4

External Marks: 70

Internal Marks: 30

Time Allowed: 3 Hrs.

Type of Course: Core Course

Course Objective:

The Objective of this course is to provide students with a conceptual understanding of cost and managerial accounting and the skills required in applying knowledge for decision making. This course emphasizes on the development and use of accounting information for internal decisions in business management. Aim of this course is to equip participants with a systematic and rigorous knowledge of management accounting practices that can be strategically applied across various functions of an organization to improve its' performance. The course also reviews contemporary developments in cost & management accounting for strategic decision

Course Outcome:

On the completion of this course the student will be able to:

CO1: Understand theories, concepts and basic principles of accounting.

CO2: Apply theories, concepts and principles of accounting for problem solving and financial decision making.

CO3: Analyze the need & relevance of application of accounting knowledge in managerial decision making.

CO4: Emphasize on the evaluation and use of accounting information for financial appraisals at individual and organizational levels.

DETAILED SYLLABUS:

UNIT -I

Financial Accounting-concept, importance and scope, accounting principles, journal, ledger, trial balance, depreciation (straight line and diminishing balance methods), Preparation of final accounts (in vertical format only) with adjustments.

UNIT -II

Analysis and interpretation of financial statements – meaning, importance and techniques, ratio analysis; trend analysis; Altzman's Z Model for analyzing financial health, cash flow analysis (AS-3)

UNIT -III

Cost accounting-meaning, importance, methods, techniques; classification of costs and cost sheet; inventory valuation; an elementary knowledge of activity-based costing.

UNIT -IV

Management accounting- concept, need, importance and scope; Budgetary control-meaning, need, objectives, essentials of budgeting, different types of budgets; standard costing and variance analysis (materials, labour); marginal costing and its application in managerial decision making.

SUGGESTED READINGS:

Python Programming
241/MBA/CC104

Credits: 4
External Marks: 70
Internal Marks: 30
Time Allowed: 3 Hours

Type of Course: Core Course

Course Objectives:

This course is designed to provide students with foundational programming skills using Python. It prepares students for advanced modules in machine learning and data analysis, covering essential programming concepts and the application of Python libraries for data manipulation, analysis, and visualization.

Course Outcomes: On the completion of this course the student will be able to:

CO1: Explain the history, applications, and basic concepts of Python programming, including setting up Python development environments like Anaconda and Colab.

CO2: Utilize Python's data types, operators, and data structures for data manipulation and analysis.

CO3: Implement conditional statements, loops, and functions to develop efficient Python scripts.

CO4: Apply Python packages such as NumPy, Pandas, and Matplotlib for data analysis and visualization.

Detailed Syllabus

UNIT I

Introduction to Python Programming: History of Python, Need for Python Programming, Applications, Basics of Python Programming, Running Python Scripts, Variables, Keywords, Input-Output, Indentation, Introduction to Anaconda and its Applications for Python, Google Colab.

UNIT II

Data Types, Operators, and Data Structures Data Types: Integers, Strings, Booleans. Operators: Arithmetic Operators, Comparison (Relational) Operators, Assignment Operators, Logical Operators, Bitwise Operators, Membership Operators, Identity Operators. Data Structures: Lists, Operations, Slicing, Methods, Tuples, Sets, Dictionaries.

UNIT III

Conditional Statements, Looping, and Functions: Conditional Statements: if, else, elif. Looping: for Loop, for Loop with Ranges, String, List, and Dictionaries, while Loop. Loop Manipulation: Pass, Continue, Break, and Else Blocks. Functions: Defining Functions, Calling Functions, Passing Arguments (Keyword and Default Arguments), Returning Values, Scope of Variables - Global and Local Variables.

UNIT IV

Modules, Packages, and Data Analysis with Python: Introduction to PIP, Installing Packages via PIP, Using Python Packages. NumPy: Introduction to NumPy, Arrays, Operations. Pandas: Introduction to Pandas, DataFrames, loc & iloc Functions, Describe Function. Matplotlib: Charting with Matplotlib, Formatting Charts, Histogram, Bar Plot, Box Plot, Scatter Plot, Line Plot, and Other Visualizations.

Managerial Economics (Basic)
241/MBA/DSE101

External Marks: 50
Internal Marks: 25
Time Allowed: 2 hours

Credits: 3

Type of Course: Discipline Specific Elective Course

Course Objectives:

‘Managerial Economics’ is a core course to acquaint the students with concepts and techniques used in the field of economics and to enable them to apply this knowledge in business decision making. Emphasis is given to changes in the nature of business firms in the context of globalization.

Course Outcomes:

On the completion of this course the student will be able to:

CO1: Understand the basic elements of managerial economics.

CO2: Apply the concepts of managerial economics for the optimum utilization of resources within ethical boundaries.

CO3: Analyze theories and principles of managerial economics for problem solving at individual and organizational level.

CO4: Critically evaluate the policies at micro economic level for inclusive growth and development.

Detailed Syllabus:

UNIT I

Managerial Economics: Nature, Scope and Principle; Theory of demand and consumer equilibrium-utility and indifference curve approach; Demand function; Elasticity of demand and its significance in managerial decision-making; Demand forecasting and its techniques.

UNIT II

Theory of Cost: Short run and long run cost curves, relation between cost and revenue, break-even point; Economies and diseconomies of scale and scope; Production function: Short term and long run production function, law of variable proportion and return to scale, Iso-quant curves.

UNIT III

Market Structure and Competition: Price and output determination under perfect competition, monopoly, monopolistic competition and oligopoly. Duopoly

UNIT IV

Modern theories of the firm: Baumol’s theory of sales maximization, Profit Maximization. National Income: Concept and Measurement, Business Cycle.

Second Semester

Human Resource Management PAPER CODE: 242/MBA/CC201

Credits:4

External Marks: 70

Internal Marks: 30

Time Allowed: 3 Hrs

Type of Course: Core Course

Course Objectives:

The Objective of this course is to provide students with a conceptual understanding of HR Concepts and its usage in organizations. This will also impart the skills required in applying theory to practice for effective decision making.

Course Outcomes: On the completion of this course the student will be able to:

CO1: Understand the theories and concepts of Human Resource Management for strategic human resource planning.

CO2: Apply the knowledge of HRM concepts for holistic development of an individual at group as well as organizational level.

CO3: Analyze the significance of HR practices for the enhancement of competitive advantage in the globalized environment.

CO4: Evaluate the HR policies and strategies under different scenarios and its effectiveness for goal attainment, change management and critical problem solving.

Detailed Syllabus:

UNIT-I

Strategic importance of HRM; objectives of HRM; challenges to HR professionals; role, responsibilities and competencies of HR professionals; HR department operations; human resource planning – objectives and process; human resource information system; Linkage between HRM and Strategic Management; Introduction to Strategic Human Resource Management and HRD

UNIT-II

Talent acquisition: Job Analysis, recruitment and selection strategies, career planning and management, succession planning, socialization and induction of new employees; training and development, investment in training, training need assessment, designing and administering training programme; executive development programme, evaluation of T & D programme

UNIT-III

Performance Appraisal: Conceptual Understanding: developing and instituting performance appraisal system, Methods of Performance Appraisal, Performance Management, linking rewards to organizational objectives, Job Evaluation, Compensation Management and incentive plans, Executive Compensation, designing and administering benefits and services

UNIT-IV

HR in knowledge era: HR in knowledge industry, HR in virtual organizations, HR in mergers and acquisitions, outplacement, outsourcing HR functions, employee leasing, HR audit, international HRM, Theories of Cultural Analysis, Managing Cross Cultural Teams, Cultural Intelligence and Impact on Work.

Financial Management
242/MBA/CC202

Credits:4

External Marks: 70

Internal Marks: 30

Time Allowed: 3 hours

Type of Course: Core Course

Course Objectives:

The objective of this course is to develop the ability to analyze, evaluate and interpret the financial information provided in the financial statements. It also serves as a fundamental tool for financial analysis and helps in successful decision making and forward planning through enhancing various skills of the students. Major objective of this course is the development of analytical and decision-making skills in finance through the usage of theoretical underpinnings and practical knowledge.

Course Outcomes:

On the completion of this course the student will be able to:

CO1: Understand the fundamental concepts in financial management.

CO2: Apply the financial theories and principles for long term and short-term financial planning.

CO3: Analyze information relating to sources and uses of finance from a financial manager's perspective.

CO4: Evaluate the financial statements presented to various stakeholders for financial decision making.

Detailed syllabus:

UNIT-I

Financial management-scope finance functions and its organization, objectives of financial management; time value of money; sources of long-term finance.

UNIT-II

Investment decisions importance, difficulties, determining cash flows, methods of capital budgeting; risk analysis (risk adjusted discount rate method and certainty equivalent method); cost of different sources of raising capital; weighted average cost of capital.

UNIT-III

Capital structure decisions-financial and operating leverage; capital structure theories - NI, NOI, traditional and M-M theories; determinants of dividend policy and dividend models -Walter, Gordon & M.M. models.

UNIT-IV

Working Capital- meaning, need, determinants; estimation of working capital need; management of cash, inventory and receivables.

Note: The topic of capital budgeting, management of cash, inventory management, and receivable management will cover theoretical concepts and simple numerical questions.

Marketing Management
242/MBA/CC203

Credits: 4

External Marks: 70

Internal Marks: 30

Time Allowed: 3 Hours

Type of Course: Core Course

Course Objectives:

Marketing management course enables a student to understand the fundamentals of marketing concept and the role marketing plays in business. This course enables a student to understand the 'Marketing mix' elements and the strategies and principles underlying the modern marketing practices. Students should be able to demonstrate their comprehension of marketing concepts and knowledge by applying those in their written exams, case studies discussions, presentations and projects. The assignments/projects would enable students to apply the marketing concepts and marketing mix elements practically and illustrate those through a written report and presentation. The course methodology encourages students to explore for themselves the role of a marketing manager and the boundaries of marketing.

Course Outcomes:

On the completion of this course the student will be able to:

CO1: Memorize and understand the various concepts of marketing and their relevance in the global business environment.

CO2: Apply marketing process and tools for value based strategic decision making for global market leadership.

CO3: Analyze the significance of marketing communication for competitive positioning of products or services.

CO4: Evaluate the marketing strategies through creative thinking ability under various scenarios.

Detailed Syllabus:

UNIT I

Meaning, Scope, Nature, Importance, Recent Trends and application; Challenges in Marketing, Core concepts of Marketing, Marketing Myopia, elements of marketing environment, creation of value chain.

UNIT II

Marketing Plan and Strategy; Market Segmentation, Bases for Segmentation, Market Targeting, Developing and Communicating Positioning Strategy, identification and managing competition, new product development

UNIT III

Consumer and Business Markets; Product Classification, Product life cycle – stages and strategies, managing product and services along PLC and Product Differentiation, Developing Pricing Strategies and Programs, Responding to Price Changes, Role of Marketing Channels, Channel Design Decision and Managing Channel Conflict.

UNIT IV

Marketing communication framework and personal selling; Communication (viral marketing, experiential marketing), Marketing Control, Emerging trends of digital marketing, role of social media in marketing, understanding the challenges of global marketing

Statistics with R
241/MBA/DSE201

Credits:3

External Marks: 50
Internal Marks: 25
Time Allowed: 2 Hours

Type of Course: Discipline Specific Elective Course

Course Objectives:

This module provides students with the foundational knowledge of R programming and statistical analysis techniques. It aims to develop proficiency in data exploration, hypothesis testing, regression, and correlation, utilizing R for statistical and analytical tasks.

Course Outcomes: On the completion of this course the student will be able to:

CO1: Demonstrate an understanding of the R environment, R Studio, data structures, and fundamental R syntax.

CO2: Apply conditional statements, looping constructs, and functions in R for data manipulation and analysis.

CO3: Perform descriptive statistics, visualize data, and conduct hypothesis testing using R.

CO4: Analyse data using statistical inference techniques and effectively communicate results through R visualizations and reports.

Detailed Syllabus

UNIT 1

Introduction to Analytics and R Programming: Overview of Business Analytics, Key Purpose of Using IT in Business, OLTP & OLAP, Data Warehousing, Data Mart, Operational Data Storage. R and RStudio: Data Structure in R, R Syntax, Data Types, Operators, and Basic Expressions, Installing and Updating Packages in R.

UNIT II

Conditional Statements, Looping, and Functions in R: Conditional Statements: if Statement, if-else Statement, if else Function, Nested if-else. Looping: for Loop, while Loop, repeat Loop, break Statement, next Statement. Functions: User-Defined Functions, Defining Functions, Passing Arguments to Functions, Local Variables and Global Variables in Functions, Looping and Conditional Statements Inside Functions.

Unit III

Descriptive Statistics and Data Visualization: Types of Data: Nominal, Ordinal, Scale, and Ratio. Measures of Central Tendency: Mean, Mode, and Median. Measures of Variability:

Range, Interquartile Range, Standard Deviation, Skewness, and Kurtosis. Data Visualization: Bar Chart, Pie Chart, Box Plot, Histogram other Statistical Chart.

Unit IV

Statistical Inference and Hypothesis Testing: Population and Sample, Null and Alternate Hypothesis, Level of Significance, Type I and Type II Errors. Statistical Tests: One-Sample t-Test, Paired Sample t-Test, Independent Samples t-Test, One-Way Analysis of Variance, and Chi-Square Test. Learning & Teaching Methods

Business Research Methods (Advanced)
241/MBA/DSE202

Credits: 3

External Marks: 50

Internal Marks: 25

Time Allowed: 2 Hours

Type of Course: Discipline Specific Elective Course

Course Objectives:

The overarching aim of this course is to acquire a basic knowledge of scientific paradigms and research methods. Further, the aim is to develop the student's ability to first, plan and in written form report a scientific study, and second, to evaluate and use scientific as well as other reports.

Course Outcomes: On the completion of this course the student will be able to:

CO1: Develop understanding of research concepts and the research process.

CO2: Apply the knowledge of research tools and techniques for critical problem solving and decision making.

CO3. Analyze the insights gained about concepts of research designs and methodology aimed at solving business problems and to communicate results to various stakeholders via research reports.

CO4. Evaluate the effectiveness of research tools and techniques for strategic decision making.

Detailed Syllabus:

UNIT-I

Introduction to Business Research and Research Design: Meaning of research; Types of research, the research process, Research applications, Features of a Good research study, Research Problem, writing a research proposal, Research Design, Meaning of Research Designs, Nature and Classification of Research Designs, Errors affecting Research Design.

UNIT-II

Data Source and Data Collection and Sampling: Primary and Secondary Data: Classification of Data;

Secondary Data: Uses, Advantages, Disadvantages, Types and sources; Primary Data Collection: Observation method, Focus Group Discussion, Personal Interview method, Data Processing, Data Editing, Coding, Classification and Tabulation of Data Sampling Design: Census v/s Sampling, Sampling Methods, Errors in sampling. Determination of Sample Size.

UNIT-III

Hypothesis Formulation, Measurement and Scaling and Questionnaire designing, Hypothesis: Types, characteristics, sources and formulation of hypotheses, errors in hypotheses. Attitude Measurement and Scaling, Measurement Error, Criteria for Good Measurement. Questionnaire Designing, Types of Questionnaires, Process of Questionnaire Designing, Advantages and Disadvantages of Questionnaire Method, Concepts of Reliability and Validity.

UNIT-IV

Data Analysis: Editing and coding of data, tabulation, graphic presentation of data, cross tabulation. Type I and II errors, one tailed and two tailed tests of significance. Parametric and nonparametric tests for univariate and bivariate data. Tests of association. Chi-square Analysis: Chi square test for the Goodness of Fit. Analysis of Variance: Completely randomized design in a one-way ANOVA. Research Report Writing: Types of research reports – Brief reports and Detailed reports; Report writing: Structure of the research report- Preliminary section, Main report, Interpretations of Results and Suggested Recommendations. Ethics in Research: Responsibility of ethics in research. References & Bibliography.

SUGGESTED READINGS:

Third Semester
Strategic Management
241/MBABA/CC301

Credits: 4

External Marks: 70
Internal Marks: 30
Time Allowed: 3 Hrs.

Type of Course: Core Course

Course Objectives:

The course aims at imparting knowledge of formulation, implementation and evaluation of business strategies, for effective planning and to introduce key strategy concepts to the students for facilitating better decision making.

Course Outcomes: On the completion of this course the student will be able to:

CO1: Develop understanding of the type of decisions taken at different levels of management. .

CO2: Apply various tools and techniques for strategic decision making and problem solving through critical thinking.

CO3: Analyze the significance of strategies and policies for gaining competitive advantage globally.

CO4: Evaluate the strategy which best fits in achieving the organizational goals under various scenarios.

DETAILED SYLLABUS:

UNIT I

Strategy: Concept and Levels, Strategic Decision Making; Schools of thought on Strategy Formulation; Strategic Management: Elements and Models in Strategic Management Process; Strategic Intent, Vision, Mission, Goals and Objectives, Strategic Business Unit.

UNIT II

Strategy Formulation: Environmental Appraisal, Organizational Appraisal, Corporate Level and Business Level Strategies.

UNIT III

Strategic Analysis and Choice: Strategic Analysis, Tools and Techniques for Strategic Analysis - BCG Matrix, Porter's Model, GE Matrix, SWOT Analysis; Strategic Choice - Process of Strategic Choice, Factors in strategic Choice.

UNIT IV

Strategy Implementation: Activating Strategies, Structural, Behavioural, Functional and Operational Implementation; Strategic Evaluation and Control.

SUGGESTED READINGS:

Business Law
241/MBABA/CC302

Credits: 4

External Marks: 70
Internal Marks: 30
Time Allowed: 3 Hrs.

Type of Course: Core Course

Course Objectives: This course gives an exposure to the students of some of the major commercial laws affecting the businesses and equip them with the deeper understanding of various provisions of the laws pertaining to businesses.

Course Outcomes:

On the completion of this course the student will be able to:

CO1: Remember different laws applicable to a business.

CO2: Apply the knowledge of laws for solving business problems while following ethical code of conduct.

CO3: Analyze cases of law and develop critical thinking to formulate plans as per the regulatory framework.

CO4: Evaluate the existing business laws in India and analyse their relevance in today's globalized environment.

Detailed Syllabus:

UNIT I

The Indian Contract Act, 1872: Meaning of a Contract, Classification of Contracts, Essentials of a Valid Contract; Performance of a Contract; Discharge of a Contract; Breach of Contract; Quasi Contracts.

UNIT II

Contracts of Indemnity: Meaning, Rights of Indemnity holder, Time of commencement of Indemnifier's Liability Are Insurance Contracts the Contracts of Indemnity?

Contracts of Guarantee: Meaning & Features of Contract of Guarantee, Difference between a Contract of Indemnity & Contract of Guarantee, Nature & Extent of Surety's Liability, Meaning & Revocation of Continuing Guarantee, Rights of Surety against Principal Debtor, Creditor & Co-Surety.

Contracts of Bailment: Definition & Essentials of Contract of Bailment, Duties and Rights of Bailor and Bailee, Duties & Rights of Finder of Goods.

Contracts of Agency: Meaning & Essentials of Contract of Agency, Different kinds of Agents- Auctioneers, Brokers & Del Credere Agents, Extent of Agent's Authority – Actual, Apparent, Authority in Emergency, Duties of Agent, Termination of Agency

UNIT III

The Sales of Goods Act, 1930: Meaning and essentials of a valid contract of sale, Distinction between sale and agreement to sell, Meaning of goods and their classification, Conditions and warranties, Doctrine of Caveat Emptor, Rights of an unpaid seller, Rights of buyer.

UNIT IV

Negotiable Instruments Act: Meaning, Characteristics and Types of Negotiable Instruments; Holder and Holder-in-due-course; Negotiation by Endorsements; Crossing of Cheque and Dishonour of Cheque.

Predictive Modelling

241/MBABA/ CC303

Credit: 4

External Marks: 70

Internal Marks: 30

Time Allowed: 3 Hrs

Type of Course: Discipline Specific Elective Course

Course Objective:

This course aims to equip students with essential data analytics skills including data preprocessing, regression, classification, association rule mining, and clustering using Python. It emphasizes practical model-building techniques, statistical evaluation metrics, and real-world implementation of predictive models.

Course Outcomes (COs):

- **CO1:** Perform data cleaning, transformation, and feature engineering for predictive model preparation.
- **CO2:** Build and evaluate linear regression models, understanding assumptions, diagnostics, and error metrics.
- **CO3:** Apply logistic regression for classification problems and assess model performance using classification metrics.
- **CO4:** Develop association rule mining models for market basket analysis and evaluate the quality of rules.

Detailed Syllabus

Unit I: Data Cleaning and Preparation

Data Import and Exploration: Understanding different data formats, basic exploratory data analysis (EDA), EDA with R/Python Programming. Data Cleaning: Handling missing values, outlier detection and treatment, data normalization and standardization. Data Transformation, feature engineering.

Unit II: Linear Regression

Simple Linear Regression: Model assumptions, estimation, hypothesis testing, and interpretation of coefficients. Multiple Linear Regression: Model building, interpretation of coefficients, multicollinearity, and model diagnostics. Model Evaluation: R-squared, adjusted R-squared, Mean Squared Error (MSE), Root Mean Squared Error (RMSE), Mean Absolute Error (MAE).

Unit III: Logistic Regression

Introduction to Classification, confusion matrix, accuracy, precision, recall, F1-score. Logistic Regression Model: Developing the model with R/Python Programming, Odds and logit, model estimation, interpretation of coefficients. Model Evaluation: ROC curve, AUC, sensitivity, specificity.

Unit IV: Clustering

Unsupervised learning, distance metrics, K-Means Clustering: Model building of K-Means

with R/Python Programming, Algorithm, determining the optimal number of clusters, evaluation. Hierarchical Clustering: Agglomerative and divisive methods, dendrograms, Model building with R/Python Programming.

Data Scraping

Course Code: 241/MBABA/ SEC301

Credit: 3 Theory

External Marks: 50

Internal Marks: 25

Time Allowed: 2 Hrs.

Type of Course: Specialization Specific Elective Course

Course Objectives

This course introduces students to the concepts, techniques, and tools used for acquiring data from web-based sources. It focuses on web scraping, data extraction, data preprocessing, and storage of structured and unstructured data for business analytics. The course also emphasizes ethical and legal considerations in data collection and prepares students to apply web-scraped data for market intelligence, competitive analysis, business decision-making, and predictive analytics.

Course Outcomes

On the completion of this course, the student will be able to:

CO1: Understand the concepts, architecture, techniques, and applications of data scraping and web data acquisition.

CO2: Apply web scraping tools and Python libraries to extract structured and unstructured data from websites, APIs, XML, and JSON sources.

CO3: Analyze, clean, transform, and manage scraped datasets for business analytics and data-driven decision-making.

CO4: Evaluate ethical, legal, and technical challenges associated with web scraping and recommend suitable data acquisition strategies.

Detailed Syllabus

Unit – I

Introduction to Data Scraping, Web Data Acquisition, Types of Web Data, Structured, Semi-Structured and Unstructured Data, Web Crawling vs. Web Scraping, HTML Fundamentals, DOM Structure, HTTP and HTTPS Protocols, Website Inspection Tools, CSS Selectors, XPath, Robots.txt, APIs for Data Collection, Applications of Data Scraping in Business Analytics.

Unit – II

Python for Data Scraping, Requests Library, BeautifulSoup, Parsing HTML Documents, Extracting Text, Images, Hyperlinks and Tables, Web Scraping using XML and JSON, Regular Expressions, Handling Pagination, Cookies and Sessions, Data Collection through REST APIs, Introduction to Selenium for Dynamic Websites.

Unit – III

Advanced Data Scraping Techniques, Scrapy Framework, JavaScript Rendering, Dynamic Web Pages, Infinite Scrolling, Login-Based Scraping, CAPTCHA Challenges, Data Cleaning, Data Manipulation, Data Transformation, Handling Missing Values, Duplicate Removal, Exporting Data to CSV, Excel, JSON and SQL Databases.

Unit – IV

Ethical and Legal Issues in Web Scraping, Data Privacy and Copyright, GDPR and Data Protection, Rate Limiting and Responsible Scraping Practices, Big Data and Web Data Integration, Predictive Analytics using Scraped Data, Business Intelligence Applications, Price Monitoring, Market Research, Sentiment Analysis, Competitive Intelligence, Emerging Trends in AI-driven Data Extraction, Intelligent Data Acquisition and Future Applications.

Machine Learning with Python

241/MBABA/ DSE303

Credit: 3

External Marks: 50

Internal Marks: 25

Time Allowed: 2 Hrs.

Type of Course: Discipline Specific Elective Course

Course Objectives:

This course provides a solid introduction to machine learning, focusing on practical implementation using R/Python. Students will gain hands-on experience in data preparation, exploration, and applying machine learning algorithms to solve business problems.

Course Outcomes: On the completion of this course the student will be able to:

CO1: Demonstrate understanding of data cleaning, preparation, and exploratory data analysis (EDA) techniques using R/Python.

CO2: Apply linear and logistic regression models to real-world datasets, interpreting coefficients and evaluating model performance.

CO3: Build and evaluate association rule mining models for market basket analysis using R/Python.

CO4: Implement clustering algorithms such as K-Means and hierarchical clustering, determining optimal clusters and evaluating their effectiveness.

Detailed Syllabus

UNIT I

Data Cleaning and Preparation: Data Import and Exploration: Understanding different data formats, basic exploratory data analysis (EDA), EDA with R/Python Programming. Data Cleaning: Handling missing values, outlier detection and treatment, data normalization and standardization. Data Transformation, feature engineering.

UNIT II

Linear and Logistic Regression: Simple Linear Regression: Model assumptions, estimation, and interpretation of coefficients. Multiple Linear Regression: Model building, interpretation of coefficients, multicollinearity, accuracy checking. Logistic Regression: Logistic Regression Model: Developing the model with R/Python Programming, confusion matrix, accuracy, precision, recall, F1-score, ROC curve, AUC.

UNIT III

Market Basket Analysis: Introduction to Association Rule Mining, Apriori Algorithm, Support, Lift, Confidence, Market Basket Analysis Applications, Evaluation Metrics for Association Rules. Model building with R/Python.

UNIT IV

Clustering: Unsupervised learning, distance metrics, K-Means Clustering: Model building of K-Means with R/Python Programming, Algorithm, determining the optimal number of clusters, evaluation. Hierarchical Clustering: Agglomerative and divisive methods, dendrograms, Model building with R/Python Programming.

Social Media Analytics

241/MBABA/SSE301

Credit: 3

External Marks: 50

Internal Marks: 25

Time Allowed: 2 Hrs.

Type of Course: Specialization Specific Elective Course

Course Objectives: This course comprises advanced disciplines and units pertaining to Analytics, Data Acquisition via web, Understanding and analyzing unstructured data along with the future implementations and growth in the discipline of Analytics. This course aims at giving exposure on the advanced aspects with regards to Analytics. The course comprises social media, Mobile, Text Analytics along with Web Scraping and the future advancements in the field of Analytics.

Course Outcomes:

On the completion of this course the student will be able to:

CO1: Understand the meaning and scope of Social Media Analytics.

CO2: Apply the tools and techniques of Social Media Analytics for solving complex business problems for the betterment of the businesses.

CO3: Analyze the patterns and techniques in Social Media & Mobile Analytics to solve complex problems.

CO4: Evaluate the effectiveness of various analytics techniques for better output.

Detailed Syllabus:

Unit I

Social Media, On-Line Social Network, Off-Line Social Network, Metrics and Measurement, Dashboard, Target Audience, Desired Action, Content, Market Research Online Communities, Cluster Analysis, Conjoint Analysis, Multidimensional Scaling, Social Media Listening, Social Media Scoring, Social Media Modelling. Understanding Mobile Analytics Concepts, difference between Mobile Analytics and Site Analytics, Natural language Processing with Mobile Analytics, Text Mining for Mobile Analytics, Mobile Analytics Tools, Churn Analytics.

Unit II

Text Data, Sources of Text Data, Information Clusters, Patterns, Trends, Tagging, Natural Learning Process, Lexical Analysis, Social Network Nodes, Linkage Structure, Node Labelling, Content- Based Classification, Word Stemming, Stemming Algorithms, Polarity of the Attitude, Psychological Profiling, Sentiment Analysis.

Web Scrapping of unstructured data, Gathering data from HTTP and HTTPS format, Web Scrapping from XML and JSON file, Regular expressions, Extraction Strategies, Term Document Matrix, Data Cleansing, Data Manipulation and Data Transformation after Scrapping.

Unit IV

Introduction to Big Data, Predictive Analysis for Business, Social Information Processing and Distributed Computing, Advances in Machine Learning, Traditional Data Models Evolve, Analytics to Solve Social Problems, Location Based Data Explosion, Data Privacy Backlash, Internet of Things, Artificial Intelligence.

Relational Database Management and SQL

241/MBABA/SSE302

Credit: 3

External Marks: 50

Internal Marks: 25

Time Allowed: 2 Hrs.

Type of Course: Specialization Specific Elective Course

Course Objective:

This course introduces the principles of database systems, including data modeling, relational database design, SQL querying, and database administration. It also provides a foundation in advanced concepts such as transactions, normalization, and NoSQL systems to prepare students for modern data-driven application development.

Course Outcomes (COs):

- **CO1:** Understand the architecture, components, and functions of database management systems and apply data modeling using ER diagrams.
- **CO2:** Create and manage database structures using SQL commands and apply constraints to ensure data integrity.
- **CO3:** Formulate complex queries to retrieve, filter, and aggregate data from relational databases using SQL.
- **CO4:** Implement table joins and set operations to extract meaningful information from multiple relational tables.

Detailed Syllabus

Unit I: Introduction to Database Management Systems

Introduction-Database System Applications, Purpose of Database Systems, Instances and Schemas, Data Models, Database Languages, Database Architecture, Database Users and Administrators, ER Diagrams.

Unit II: Creating Table

Creating and Managing Tables, DROP TABLE, ALTER TABLE, TRUNCATE TABLE, Inserting and Updating Data: INSERT INTO, UPDATE, DELETE, Constraints and Indexes: PRIMARY KEY, FOREIGN KEY, UNIQUE, NOT NULL, CHECK, DEFAULT.

Unit III: Select Query

Forms of Basic SQL Query, Nested Queries, Filtering Data, Logical Operators (AND, OR, NOT), Comparison Operators, Aggregate Functions (COUNT, SUM, AVG, MIN, MAX), NULL values, SELECT, WHERE, ORDER BY, GROUP BY, HAVING, DISTINCT.

Unit IV: Joining Tables and Advance SQL

INNER JOIN, LEFT JOIN, RIGHT JOIN, FULL OUTER JOIN, CROSS JOIN, SELF JOIN, Indexes, Other Operations: UNION and UNION ALL, INTERSECT, EXCEPT. Transactions, Normalization, CASE and When, Sub Queries, Overview of No SQL, Types of No SQL Databases, MongoDB, Migrating from RDBMS to No SQL, No SQL in Cloud, Database Administration.

Data Visualisation with Power BI

241/MBABA/SSE303

Credit: 3

External Marks: 50

Internal Marks: 25

Time Allowed: 2 Hrs.

Type of Course: Specialization Specific Elective Course

Course Objectives

This course provides a comprehensive understanding of Power BI techniques and their application in business intelligence. Students will master the functionalities of Power BI, learning to create visually appealing and interactive dashboards that effectively communicate complex data insights. The course emphasizes data preparation, exploration, visualization, and storytelling to enable data-driven decision-making.

Course Outcomes: On completion of this course, the student will be able to:

CO1: Explain the role of Power BI in generating value from data.

CO2: Create and enhance visualizations in Power BI, including dashboards and advanced visualization techniques.

CO3: Design and publish comprehensive dashboards, applying best practices in visualization and interactivity, utilizing Power BI's project roles, data profiling, and transformations for effective business intelligence applications.

CO5: Analyze and interpret data visualizations to make informed decisions and communicate insights effectively.

Detailed Syllabus

Unit I

Power BI Deployment and Dataset Preparation-Power BI Deployment Modes, Project Discovery and Ingestion, Power BI Project Roles: Admin and Project Role Collaboration, Power BI Licenses, Data Warehouse Bus Matrix, Dataset Design Process, Data Profiling and Dataset Planning, Data Transformations: Import Mode and Direct Query Mode

Unit II

Query Design and Data Modeling- Query Design per Dataset Mode, Data Sources and Authentication, Privacy Levels and Power BI Desktop Options, M Queries: Data Source Parameters, Staging Queries, Fact and Dimension Queries, M Query Summary and Data Types, Direct Query Data Models: Relationships View, Data View, Report View, Fact Tables, Dimension Tables, and Relationships

Unit III

Report Planning and Visualization Techniques - Report Planning and Live Connections to Power BI Datasets, Choosing the Visual and Visual Interactions, Slicers and Report Filter Scopes, Report Filter Conditions and Visual-Level Filtering, Visualization Formatting and Custom Visuals

Unit IV

Advanced Dashboards and Insights, Dashboards: Drill-Through Report Pages and Bookmarks, Analytics Pane and Quick Insights, Custom Visuals and Dashboard Design, Multi-Dashboard Architectures, Best Practices for Dashboard Deployment

Fourth Semester
Entrepreneurship and Innovation
241/MBABA/CC401

Credit: 4

External Marks: 70
Internal Marks: 30
Time Allowed: 3 Hrs.

Type of Course: Core Course

Course Objectives:

The course provides a framework for comprehending the process of forming and leading creative businesses. This will prepare students to deal effectively with changing market and client needs as they become more sophisticated and knowledgeable. Entrepreneurship has a significant impact on the country's economic growth and development. The dynamic of the corporate world is shifting in tandem with the global economy. The goal of this course is to instil and ignite an entrepreneurial spirit in pupils.

Course Outcomes:

On the completion of this course the student will be able to:

CO1: Identify and understand various constituents and environmental factors for innovation and entrepreneurship development.

CO2: Apply SWOT analysis for internal and external environmental assessment for devising a creative strategy for feasible business plans, within ethical boundaries.

CO3: Analyze feasibility of businesses under the constantly changing global environment for sustainable global competitiveness.

CO4: Evaluate the alternatives in order to be able to create successful business plans.

Detailed Syllabus:

UNIT-I

Entrepreneurship: India's startup evolution, Concept, trends, benefits; Rural entrepreneurship, social entrepreneurship, women entrepreneurship; role of entrepreneurship in economic development; Entrepreneur: - characteristics, Entrepreneurial decision process, functions, need for an entrepreneur, types of entrepreneurs.

UNIT-II

Starting the venture: generating business idea – sources of new ideas, methods of generating ideas, creative problem solving, opportunity recognition; environmental scanning, competitor and industry analysis; feasibility study – market feasibility, technical/operational feasibility, financial feasibility: drawing business plan; preparing project report; Business plan- How to develop it, what all should it have, what it shouldn't have presenting business plan to investors

UNIT-III

Need for finance, sources of finance, Venture capital, Nature and Overview, Venture capital process,

locating venture capitalists; Functional Plans: Marketing Plan- Market Segmentation, Market sizing, pricing strategy; Organizational Plan- form of ownership, designing organization structure, job design, manpower planning and Financial Plan.

UNIT-IV

Project Planning & Project appraisal; legal issues – intellectual property rights patents, trademarks, copyrights, trade secrets, licensing and franchising; Team Formation, Team Work Planning; Role of Government in Promoting Entrepreneurship; Entrepreneurial environment: factors affecting entrepreneurship growth, entrepreneurial motivation; Digital haves and Have-nots, Digital economy as a resource.

Advanced Analytics with Python

241/MBABA/CC402

Credit: 4

External Marks: 70

Internal Marks: 30

Time Allowed: 3 Hrs.

Type of Course: Core Course

Course Objectives:

This course delves into advanced machine learning and artificial intelligence techniques, focusing on decision trees, random forests, SVMs, NLP, neural networks, and AI. It equips students with the skills to build, evaluate, and deploy sophisticated models for solving complex data-driven challenges.

Course Outcomes: On the completion of this course the student will be able to:

CO1: Understand decision trees, random forests, and SVMs, including their principles, construction, and evaluation metrics.

CO2: Build and evaluate advanced machine learning models, applying them to classification, regression, and text analysis problems using Python.

CO3: Develop and apply NLP techniques for text preprocessing, sentiment analysis, and text classification.

CO4: Implement neural networks and understand their role in AI, exploring applications, ethical considerations, and the distinction between machine learning and AI.

Detailed Syllabus

UNIT I

Decision Trees and Random Forests: Concept, building a decision tree, pruning, and interpretation. Random Forests: Ensemble learning, bagging, and feature importance. Model Evaluation: Accuracy, precision, recall, F1-score, confusion matrix. Model building with R/Python Programming.

UNIT II

Support Vector Machines (SVM): Introduction to Support Vector Machines, Linear SVM and Kernel Trick, Non-linear SVM, SVM for Classification and Regression, Model Evaluation and Hyperparameter Tuning. SVM Model building with Python.

UNIT III

Natural Language Processing (NLP): Introduction to Natural Language Processing, Text Preprocessing, Feature Extraction and feature engineering, Sentiment Analysis, Named Entity Recognition, Text Classification. NLTK Library in Python.

UNIT IV

Neural Networks and Artificial Intelligence: Introduction to Artificial Neural Networks, Activation Functions, Deep Learning. NN Model building with Python. Introduction to Artificial Intelligence, Search Algorithms, Knowledge Representation and Reasoning, Machine Learning vs. Artificial Intelligence, AI Applications and Ethics.

Data Visualisation with Tableau

241/MBABA/DSE401

Credit: 3

External Marks: 50

Internal Marks: 25

Time Allowed: 2 Hrs

Type of Course: Discipline Specific Elective Course

Course Objectives

This course provides a comprehensive overview of data visualization techniques using Tableau. Participants will learn to communicate complex data effectively through visually appealing and interactive dashboards. The course emphasizes data preparation, exploration, visualization, and storytelling to support data-driven decision-making.

Course Outcomes: On completion of this course, the student will be able to:

CO1: Explain the role of Tableau in data visualization and its significance in business intelligence.

CO2: Create a variety of visualizations using Tableau, including advanced techniques such as mapping and parameterization.

CO3: Design and publish comprehensive dashboards and stories, following best practices for interactivity and visualization.

CO4: Analyze and interpret data visualizations to draw actionable insights and support decision-making processes.

Detailed Syllabus

Unit I

Tableau Software Ecosystem, Toolbar Icons, Data Window and Aggregation, Tableau Data Source, Heat Maps, Tree Maps, Bar Charts, Line Charts, Area Fill Charts, Pie Charts, Scatter Plots, Circle Views.

Unit II

Bullet Graphs, Packed Bubbles, Histograms, Boxplots, Gantt Charts, Cross-tabulation, Sorting Data, Enhancing Views with Filters, Sets, Groups, and Hierarchies.

Unit III

Dashboard Designing, Dashboard Actions, Joining Database, Functions in Tableau (Aggregate, Numeric, and Date Functions), Advanced Mapping, Advanced Parameters, Tableau Best Practices, Combining Multiple Dashboards into Stories, Publishing Stories and Dashboards.

Unit IV

Report Planning, Live Connections to Datasets, Choosing the Visual, Visual Interactions, Slicers, Report Filter Scopes, Report Filter Conditions, Visual-Level Filtering, Visualization Formatting, Custom Visuals and Dashboards: Drill-through Report Pages, Bookmarks, Analytics Pane, Quick Insights, Custom Visuals, Dashboard Design, Multi-Dashboard Architectures.

Machine Learning with Python
241/MBABA/DSE402

Credit:3

External Marks: 50
Internal Marks: 25
Time Allowed: 2 Hrs

Type of Course: Discipline Specific Elective Course

Course Objectives:

This course provides a solid introduction to machine learning, focusing on practical implementation using R/Python. Students will gain hands-on experience in data preparation, exploration, and applying machine learning algorithms to solve business problems.

Course Outcomes: On the completion of this course the student will be able to:

CO1: Demonstrate understanding of data cleaning, preparation, and exploratory data analysis (EDA) techniques using R/Python.

CO2: Apply linear and logistic regression models to real-world datasets, interpreting coefficients and evaluating model performance.

CO3: Build and evaluate association rule mining models for market basket analysis using R/Python.

CO4: Implement clustering algorithms such as K-Means and hierarchical clustering, determining optimal clusters and evaluating their effectiveness.

Detailed Syllabus

UNIT I

Data Cleaning and Preparation: Data Import and Exploration: Understanding different data formats, basic exploratory data analysis (EDA), EDA with R/Python Programming. Data Cleaning: Handling missing values, outlier detection and treatment, data normalization and standardization. Data Transformation, feature engineering.

UNIT II

Linear and Logistic Regression: Simple Linear Regression: Model assumptions, estimation, and interpretation of coefficients. Multiple Linear Regression: Model building, interpretation of coefficients, multicollinearity, accuracy checking. Logistic Regression: Logistic Regression Model: Developing the model with R/Python Programming, confusion matrix, accuracy, precision, recall, F1-score, ROC curve, AUC.

UNIT III

Market Basket Analysis: Introduction to Association Rule Mining, Apriori Algorithm, Support, Lift, Confidence, Market Basket Analysis Applications, Evaluation Metrics for Association Rules. Model building with R/Python.

UNIT IV

Clustering: Unsupervised learning, distance metrics, K-Means Clustering: Model building of K-Means with R/Python Programming, Algorithm, determining the optimal number of clusters, evaluation. Hierarchical Clustering: Agglomerative and divisive methods, dendrograms, Model building with R/Python Programming.

Natural Language Processing
241/MBABA/SSE401

Credit:3

External Marks: 50
Internal Marks: 25
Time Allowed: 2 Hrs

Type of Course: Specialization Specific Elective Course

Course Objective:

This course introduces students to the principles, methodologies, and tools used in text mining and natural language processing. It focuses on extracting patterns, relationships, and insights from unstructured text using both statistical and machine learning techniques, with hands-on applications in feature extraction, sentiment analysis, clustering, and topic modeling.

Course Outcomes (COs):

- **CO1:** Understand the foundations of text mining, NLP tasks, and apply core preprocessing techniques.
- **CO2:** Extract features, opinions, and semantic relationships using statistical and kernel-based methods.
- **CO3:** Apply classification and clustering methods to categorize and group textual data using machine learning approaches.
- **CO4:** Implement topic modeling and probabilistic models like LDA, HMM, and CRFs for text-based information extraction.

Detailed Syllabus

Unit I Introduction to Text Mining

Basics of Text Mining, Natural Language Content Analysis, Core Text Mining Operations, Associations, Using Background Knowledge for Text Mining, Domain Ontologies, Domain Lexicons. Text Mining Pre-processing Techniques, Task Oriented Approaches, NLP Tasks, Tokenization, Part-of-Speech Tagging, Syntactical Parsing and Shallow Parsing.

Unit II Relationships between Words ,Extracting Features, Relations from Text

Tokenizing by N-gram, Counting and Filtering N-gram, Analysing Bigrams to provide Context in Sentiment Analysis, visualizing a Network of Bigrams , Counting and Correlating Pairs of Words , Counting and Correlating among Sections, Examining Pairwise Correlation.

Finding Implicit Features, Finding Opinion Phrases and their Polarity, Context-Specific Word Semantic Orientation, Analysis of Word and Document Frequency, tf-idf, Zipf's Law, bind tf_idf Function, Subsequence Kernels for Relation Extraction, Capturing Relation Patterns with a String Kernel.

Unit III Text Categorization and Clustering

Applications of Text Categorization, Document Representation, Knowledge Engineering Approach to Text Categorization, Machine Learning Approach to Text Categorization, Evaluation of Text Classifiers. Clustering Tasks in Text Analysis, Clustering Algorithms and Clustering of Textual Data.

Unit IV Topic Modelling and Probabilistic Models for Information Extraction

Latent Dirichlet Allocation, Word Topic Probabilities, Per-Document Classification, By words Assignments, Alternative LDA Implementations. Hidden Markov models, Stochastic Context Free Grammar, Conditional Random fields, Parallel Learning Algorithms.

Python Programming for Analytics

241/MBABA/SSE402

Credit:3

External Marks: 50

Internal Marks: 25

Time Allowed: 2 Hrs

Type of Course: Specialization Specific Elective Course

Course Objectives:

This course is designed to provide students with foundational programming skills using Python. It prepares students for advanced modules in machine learning and data analysis, covering essential programming concepts and the application of Python libraries for data manipulation, analysis, and visualization.

Course Outcomes: On the completion of this course the student will be able to:

CO1: Explain the history, applications, and basic concepts of Python programming, including setting up Python development environments like Anaconda and Colab.

CO2: Utilize Python's data types, operators, and data structures for data manipulation and analysis.

CO3: Implement conditional statements, loops, and functions to develop efficient Python scripts.

CO4: Apply Python packages such as NumPy, Pandas, and Matplotlib for data analysis and visualization.

Detailed Syllabus

UNIT I

Introduction to Python Programming: History of Python, Need for Python Programming, Applications, Basics of Python Programming, Running Python Scripts, Variables, Keywords, Input-Output, Indentation, Introduction to Anaconda and its Applications for Python, Google Colab.

UNIT II

Data Types, Operators, and Data Structures Data Types: Integers, Strings, Booleans. Operators: Arithmetic Operators, Comparison (Relational) Operators, Assignment Operators, Logical Operators, Bitwise Operators, Membership Operators, Identity Operators. Data Structures: Lists, Operations, Slicing, Methods, Tuples, Sets, Dictionaries.

UNIT III

Conditional Statements, Looping, and Functions: Conditional Statements: if, else, elif. Looping: for Loop, for Loop with Ranges, String, List, and Dictionaries, while Loop. Loop Manipulation: Pass, Continue, Break, and Else Blocks. Functions: Defining Functions, Calling Functions, Passing Arguments (Keyword and Default Arguments), Returning Values, Scope of Variables - Global and Local Variables.

UNIT IV

Modules, Packages, and Data Analysis with Python: Introduction to PIP, Installing Packages via PIP, Using Python Packages. NumPy: Introduction to NumPy, Arrays, Operations. Pandas: Introduction to Pandas, DataFrames, loc & iloc Functions, Describe Function. Matplotlib: Charting with Matplotlib, Formatting Charts, Histogram, Bar Plot, Box Plot, Scatter Plot, Line Plot, and Other Visualizations.

Cloud Computing
241/MBABA/SSE403

Credit:3

External Marks: 50

Internal Marks: 25

Time Allowed: 2 Hrs

Type of Course: Specialization Specific Elective Course

Course Objectives: The objective of the course is to give students a comprehensive view understanding of the vision and impact of Cloud, cloud and IoT Market perspective and IoT and Cloud architecture.

Course Outcomes:

On the completion of this course the student will be able to:

CO1. Define and understand the concepts related to internet of things and cloud computing.

CO2: Apply cloud computing techniques for various applications for solving critical problems.

CO3: Analyse cloud computing services used at various levels.

CO4: Evaluate the efficacy of cloud computing techniques and designing cloud-based applications

Detailed Syllabus:

Unit - I

Overview of Cloud Computing: Brief history and evolution - history of cloud computing, evolution of cloud computing, traditional vs. cloud computing, cloud service models (IaaS, PaaS & SaaS), cloud deployment models (public, private, hybrid and community cloud), benefits and challenges of cloud computing, introduction to AWS public cloud vendor, cost optimization in AWS, basics of virtualization, virtualization technologies, server virtualization, VM migration techniques, role of virtualization in cloud computing, introduction to EC2 service of AWS.

Unit – II

Working with Private Cloud: Private cloud definition, characteristics of private cloud, private cloud deployment models, private cloud vendors - CloudStack, OpenStack, Eucalyptus Microsoft, private cloud ± benefits and challenges, private cloud implementation in Amazon EC2 service.

Unit – III

Working with Public Clouds: What is public cloud, why public cloud, when to opt for public cloud, public cloud service models, public cloud players, infrastructure as a service offering, IaaS vendors, PaaS offerings, PaaS vendors, software as a service, demonstrating public cloud with AWS ± storage and database services, private vs. public cloud ± when to choose.

Unit - IV

IoT Architecture- Introduction, State of the art: Architecture reference model introduction, reference model and architecture, IoT reference model. IoT Reference Architecture: IoT reference architecture- introduction, functional view, information view, deployment and operational view, other relevant architectural views, realworld design constraints- introduction, technical design constraints-hardware is popular again, data representation and visualization, interaction and remote control.
